	IMP3501-5	5 gal	61.33

6 Common Sense Tips for Spray Guns

1. Use the right tools to clean your guns. The wrong tools can damage the tips or seals and adversely affect the spray pattern.
2. It's better to use a modern gun washer. Don't soak guns in dirty lacquer thinner, which can cause the air and fluid passages to become clogged with paint residue, compromising spray quality.
3. To achieve the best possible paintwork, make sure the air is clean.
4. Use the correct pressure settings and the right size hose.
5. Always use respiration equipment!
6. And remember to buy your spray guns, spray gun equipment, cleaner, and tools from COLORMATCH.

TONY'S Gun Cleaner Tips—Gun Cleaner vs. Lacquer Thinner

Compliance: Solvent has the highest VOC level of any product we use in the refinsh shop. As the EPA continues to place restrictions on its use, and tracks VOC levels in some parts of the country, we will most likely see lacquer thinner go away at some point—just as lacquer paint did. *Make the switch now* from lacquer thinner to gun cleaner and get ahead of the game on compliance and promote your business as “Green”.

Benefits: Gun cleaner has a longer life than lacquer thinner and will not have to be changed as often. Gun cleaner will remove paint and clean paint equipment more effectively than thinner, and is much gentler on the seals of the expensive guns and equipment that you have invested in.

Recycling: Using disposable cups can eliminate cans, mixing cups and using large amounts of cleaning products. Gun cleaner is recyclable and can be brought back to strength with the addition of a little acetone. This can not only save money, but eliminate waste.

Summary: *Use gun cleaner, not lacquer thinner! Get ahead of compliance; clean more effectively; extend the life of your expensive equipment; and do what's best for the environment.*
